the annual sales of the three oil fields are only about 100,000 barrels per day, the average of the 100 largest oil fields in the world. The average of the 100 largest oil fields in the world is about 1,000,000 barrels per day.

the report for a number of years. With the exception of the 1994 report, the amount of money allocated to the Center has been 10 percent of the agency's budget. It is not possible to place a value on the Center's work, but an annual estimate of a grant-in-kind value for the Center on the grounds of \$100,000 to \$150,000 is reasonable.

This figure consists of three panels labeled (A), (B), and (C). Panel (A) shows a control histological section with minimal staining. Panel (B) shows a section treated with 10^{-7} M TGF- β 1, exhibiting increased dark staining indicating collagen deposition. Panel (C) shows a section treated with both 10^{-7} M TGF- β 1 and 10% FBS, showing even more intense staining than panel (B).

Figure 1 consists of four panels, (a) through (d), each showing a histological section of lung tissue from a mouse. Panel (a) is a control showing normal lung architecture with clear alveoli. Panel (b) shows mild inflammation with some dark-staining cells. Panel (c) shows moderate inflammation and some alveolar thickening. Panel (d) shows severe inflammation, alveolar collapse, and extensive necrosis, indicating a high level of infection. A scale bar is located in the bottom right corner of panel (d).

5. If the decision is a called-out unsatisfactory one, it is a false decision, and the error is called a *type II error*. In the case of a called-out satisfactory one, the error is called a *type I error*. In short, the error is called a *type I error* if the decision is a called-out satisfactory one, and a *type II error* if the decision is a called-out unsatisfactory one.

The 1997-98 season was the worst on record, with 17.7 tonnes of debris nominally arriving at the beach. The increased storminess resulting from the 1997-98 El Niño brought heavy rain and increased beach erosion. In 1998, the beach was damaged by a storm which left 550,000 cubic metres of the beach material in the ocean. The cost of clearing damaged material was US\$200,000.

The basic developmental and organizational characteristics of the Indian Area Development Project (IADC) are shown in Table 1. The IADC was organized to carry out the following functions:

1. The first is the fact that the "new" social movements have been able to mobilize large numbers of people around a common cause, such as the environment or human rights. This has been achieved through a combination of factors, including the use of mass media, the formation of new organizations, and the development of a shared sense of identity and purpose.

13. The essay in *Letter to the Public* is most likely taken from the possession of the landowner who married the daughter of the first owner.

It will be of great interest to see how the results of the present study compare with those of the other studies mentioned above.
