- Maximum open area with beautiful landscape.
- Walking track within the compound.
- 24 hours security with provision for intercom.
- 24 hours power back-up & water supply.
- Rain Water harvesting
- Scientifically designed layout with proper ventilation.

Construction Specification:

All towers are Earthquake resistant R.C.C frame structure duly vetted & certified. Fly ash bricks are used for walls with weather proof paints of low VOC content. High performance toughened glass is used in all towers, which helps reduce the HVAC load of the buildings.

Services:

Underground and overhead water tanks with pumps for uninterrupted supply of water has been planned. The space allocation for substations is been identified separately for Housing, IT, and Commercial , with a back-up of DG sets as well. Around the Building along the Roads Post top lanterns with LED lamps are planned using underground cables. The common spaces are naturally ventilated, and provisions have been made for individual occupant to install their air-conditioning systems. STP for the required capacity has been planned separately for housing and IT towers. Solar powered electricity has been planned for common area.
